

SINEAX VB 604s

Programmable multifunctional transmitter with REMOTE I/O functionality.

for direct currents, direct voltages, temperature sensors, teletransmitters or potentiometers

SINEAX VB604s is a multifunctional transmitter for top-hat rail assembly with the following main characteristics:

- Measurement of DC voltage, DC current, temperature (RTD, TC) and resistance
- Programmable remote I/O functionality. Readout of all input variables and internally calculated values via MODBUS. Simultaneously, the outputs and the relay may be controlled via MODBUS.
- Free selection as to whether the output variables are dependent on the input variables or whether the outputs are controlled independently of the inputs via MODBUS.
- Sensor connection without any external jumpers
- 2 inputs (e.g. for sensor redundancy or difference formation)
- 2 outputs (U and/or I)
- 2 inputs can be linked with each other and allocated to the 2 outputs which enables calculations and sensor monitoring (e.g. prognostic maintenance of sensors).
- System capability: Communication via Modbus interface
- Freely programmable relay, e.g. for limit or alarm signalling
- AC/DC wide-range power supply unit
- Pluggable high-quality screw terminals

All settings of the instrument can be adapted to the measuring task by PC software. The software also serves visualising, commissioning and service

Please note

The following device types are available:

a) VB604s with measuring input for 2x direct current [mA]

The measuring inputs 1 and 2 are galvanically connected. If 2 input sensors or input variables are used, observe combination options in Table 3 and circuit instructions contained in the operating instructions!

Analog outputs 1 and 2 →

The two outputs are galvanically connected and have a common earth. Voltage and current output software-configurable.

Direct current

Output range	$\pm 20 \text{ mA}$, range may be freely set
Burden voltage	max. 12 V
Open circuit voltage	< 20 V
Limit	Adjustable, max. $\pm 22 \text{ mA}$

Other monitoring operations

Drift monitoring	Monitoring of measured value difference between 2 input sen- sors for a certain period of time (e.g. due to different sensor response times). If the limit value is exceeded for this time, an alarm is signalled. (See limit values 1 and 2)
Sensor redundancy	Measurement with 2 temperature sensors; if sensor 1 fails (fault) sensor 2 is activated for bridging (see measuring quantities for outputs)

Alarm signalling

Relay contact	With closed contact, the yellow LED shines, invertible
Alarm LED	Adjustable 0...60 s
Time delay	For sensor breakage and short cir- cuit, value adjustable -10...110%
